Flexitallic 305

Compression Packing

Flexitallic 305 compression packing, is a high quality packing constructed by square -braiding high purity Exfoliated Graphite.

Flexitallic 305 can be used in sealing pump shafts and valve stems. The soft compressible nature of Exfoliated Graphite assists in providing a good sealing performance at relatively low loads. Flexitallic 305 possesses excellent chemical resistance and is suitable for use in applications involving a wide range of media (with the exception of strong oxidising chemicals). This packing material is particularly suitable for sealing high pressure, high temperature valves in the petrochemical industries.

- Materials of construction: High purity Exfoliated Graphite.
- Colour: Black (shiny).
- Typical applications: Rotary Pumps and Valves stems.
- API 589 Fire Safe approval.
